

Calibration Service Center

Please visit www.ace-instruments.net, there you will find the address details and prices including the form of payment for a calibration service.

General support: info@ace-instruments.net

Herewith I/we give the order for the calibration of the following devices:

Device	Amount	Calibration voucher	
		yes	no

Date / Company stamp / Signature of the client

Why is a calibration necessary?

■ To guarantee and keep the accuracy of a breathalyzer, you have to readjust and calibrate it regularly.

- The more often the device is used the more the zero point is influenced.
- The higher the alcohol concentration is, the more the zero point is relocated.
- Devices which are used rarely have a decreased sensibility.

■ Guarantee expires if you don't pay attention to the calibration ranges.

■ Regardless of the use you should send your breathalyzer to a calibration service in certain time intervals.

■ Factors of influence on the measuring result:

- Alcohol amount
- Period of the consumption of alcohol
- Gender
- Age
- Weight
- Height
- Drinking habits
- Health state
- Vitality of the liver
- Size of the lung
- Admission of food during the consumption of alcohol
- Influence of medicine

Calibration of ACE

■ Each breathalyzer which you buy from ACE can also be calibrated by the ACE calibration service. Of course we also calibrate devices which were bought from other contractors, as long as these devices are identical in construction to the devices sold by ACE.

■ Print the calibration return receipt, fill in all required information and send it together with the breathalyzer (in a franked parcel) to the address to be found on www.ace-instruments.net.

■ Breathalyzers contain damageable electronic. Pack the device in a way, which prevents it from any damages.

■ We recommend a sending as parcel, so that in case of a loss the parcel can be tracked and traced and that you also have a confirmation from the post office.

The Service flat charge includes the following benefits

- Service for a fixed price incl. VAT and return receipt in insured parcels
- Sensor check with state-of-the-art analyzers
- Calibration in a professional laboratory
- Calibration done by a technically well trained team
- Calibration certificate
- 1 pair of new batteries

If a reparation or sensor renewal is necessary you will be contacted for an estimate of cost.

Right of revocation, disclaimer, battery act, privacy policy and general terms of sale and business on www.ace-instruments.net (AGBs)
We recommend to send the device(s) in an insured parcel, so if it is lost you can track and trace the parcel and also have a confirmation from the post office.
